Mission: Promote Sustainable Growth for the European Photonics Industry

EPIC is owned and operated by its members: SMEs, R&D laboratories and universities, as well as larger companies. Benefits for EPIC's members are:

- European R&D projects that address their needs
- A cutting-edge information: EPIC members receive all reports free of charge
- Higher margins: roadmaps will be used to develop standards that create higher manufacturing margins
- A direct participation in a dialogue with the European Commission
- Members decide on each year's programme content
- Networking at a high level with leaders in photonics technologies and applications.

Foreword

Dear EPIC members,

It is my pleasure to write you once again after this, our second year, working as a European Organisation to promote the sustainable growth of the Photonics Industry.

Didn't it turn out to be a great year?

Last year, I wrote that we had made an excellent start in our bid to bring Photonics to the front page of European development and investment.

From the initial positioning paper to the European Commission "Photonics for the 21st Century", we were able to go on to develop this program into a very real Technology Platform: Photonics²¹, which was accepted by the European Commission and formally founded in December 2005. For those of you who attended, I am sure that you will agree that the foundation ceremony was an impressive event by any standards, with more than 200 participants from the Photonics industry and research community in attendance. Today, we can boast that Photonics²¹ has over 380 members from 27 countries, 50% of whom come from industry.

This year, it is tempting to say that we are in the home stretch, but this is just the beginning. As we all know, this is when we must remain even more focused and run even faster! It is essential that we now make effective use of what we have achieved to date. I would like to especially thank all those EPIC members who were actively involved in the creating of the Strategic Research Agenda, and to urge all members to continue to contribute to the working groups of Photonics²¹ to work towards getting the EPIC objectives written into the 7th framework programme.

I cannot miss this opportunity to thank all EPIC members, my colleagues at the board and especially Tom Pearsall, for all their contributions and support throughout 2005.

Yours sincerely,

Dr. Bernd Schulte,
President

EPIC Board (from left to right): B. Stapp, Osram Semiconductors; J. Halls, Cambridge Display Technologies; K. Brunner, Philips Lighting; J.T. Audren, Sagem Défense & Sécurité; K. Streubel, Osram Semiconductors; sitting: B. Schulte, Aixtron.

A word from the General Secretary

2005 was a very good year for EPIC. We welcomed 16 new members during the year, with a good mix of large and small companies located across Europe. Working together, EPIC members were effective in presenting the compelling vision for the development of photonics technologies in Europe,

and these actions resulted in the support of the European Commission for the creation of the Photonics Technology Platform: Photonics²¹. To reach this milestone, EPIC has learned to work in a collaborative mode with other much larger organisations, like the VDI, the European Optical Society, and the Department of Trade and Industry in the UK, without losing its identity. At the same time we have been successful at leveraging the agenda of EPIC's members through these collaborations. The creation of the Photonics²¹ platform represents a quantum leap for European photonics, opening the door to extraordinary possibilities. Now the work must begin to use the strength of the Photonics²¹ Platform to realise the benefits from these opportunities.

Seven EPIC members joined together to write a successful proposal for 1 million euros to implement the industry – university component exchange programme: ACCORD. I hope that this is the first of many successful joint programmes among EPIC members to advance the support of photonics technologies in Europe.

Finally, the financial condition of EPIC continues to be sound. The contribution to our resources from a few European projects has enabled EPIC to grow and to strengthen its influence in Europe, while keeping adhesion fees at their level in 2003.

In a word, EPIC achieved all its major objectives in 2005.

With the Photonics²¹ platform now in the operational phase, EPIC will work to coordinate platform actions that address the priorities of our members. In 2006, we propose to evolve our technology working groups to focus on these priorities.

The next European Framework Programme, FP-7, will start in January of 2007. EPIC will be working during this year to assure that the most important issues in photonics technologies will be covered in the first call for R&D proposals. In addition to technology issues, it is now time to develop a long-term plan for financial and operational support of the Photonics²¹ platform. While EPIC consortium may appear to be the most logical administrator of the technology platform, we need to develop the resources necessary for sustainable and effective operation of Photonics²¹. We will work with members, the European Commission, and our collaborators across Europe to develop this plan during 2006.

Thomas P. Pearsall,
General Secretary

Overview

A warm welcome
to our new members

EPIC continues to recruit new members. These European companies and research laboratories have joined EPIC during the last year:

Barco

President Kennedypark 35,
B-8500 Kortrijk, Belgium
Patrick Vandenberghe
patrick.vandenberghe@barco.com

Laser Diagnostic Instruments

113 A, Kadaka St.,
12915 Tallinn, Estonia
Sergey Babichenko
sergeyb@ldi.ee

Cedova

Hightech Campus12B,
5656 AE Eindhoven,
The Netherlands
Huub Ambrosius
huub.ambrosius@cedova.com

Microelectronics Institute of Barcelona (Imb-CNM, CSIC)

Campus UAB,
08193 Bellaterra, Spain
Carlos Dominguez
Carlos.Dominguez@cnm.es

CEIT

Paseo Manuel Lardizabal 15,
20018 San Sebastian, Spain
Santiago Miguel Olaizola

Publications

Reports

Five CD-Roms have been produced and distributed in 2005 gathering presentations, reports and pictures on following events:

- EPIC – Workshop on OLEDs: Building European Infrastructure
Cambridge, UK, 6 – 7 June 2005
- EPIC – Workshop on Universal Broadband Access
ECOC 2005, Glasgow, UK, 25 September 2005
- EPIC - Biophotonics Excellence Course
Torino, Italy, 6 June 2005
- EPIC – Workshop on Laser Applications in Europe
Dresden, Germany, 23-24 November 2005
- Launch of the Photonics Technology Platform
Brussels, Belgium, 1 - 2 December 2005

In February 2005, EPIC and the VDI jointly published "**Photonics for the 21st Century**", the vision document that led to establishment of the Photonics Technology Platform.

A market report called "**Building European OLED Infrastructure**" was published and distributed to all EPIC Members in August, 2005. The report is now on sale from i-Suppli for 4 500 .

A market report called "**Photonics in the Automobile**" was published and distributed to all EPIC members in March 2005. The report is now on sale from Yole Développement for 2 450

Press

A number of articles have appeared in the professional press in 2005, among them:

- "Solid-state lighting in the automobile: concepts, market timing and performance" / LEDs Magazine in April 2005
- "Photonics report advises new direction for Europe" / Opto & Laser Europe, May 2005, Issue 128

Conferences Presentations

EPIC – Invited Presentation: Building European Infrastructure
in Photonics
4–6 April 2005
Royal Dublin Society, Dublin, Ireland

EPIC – Invited Presentation: Towards a Photonics
Technology Platform
24 May 2005
German Glass Association, Würzburg, Germany

International Coalition of Optoelectronics Industry Associations
22 - 23 September 2005
Edinburgh, UK

EPIC – Invited Presentation: Building the Photonics
Technology Platform
12 September 2005
Photonics North, Toronto, Canada

Actions 2005

Photonics Technology Platform

EPIC has been instrumental in the creation of the Photonics Technology Platform with the following objectives:

- Bring together all interested stakeholders to develop a long-term vision
- Members create a coherent, dynamic strategy to achieve that vision
- Members steer the implementation of an action plan to deliver agreed programmes of activities
- The **Strategic Research Agenda** forms a crucial part of the implementation strategy, to optimise the contribution of RTD to the process
- Generate sustainable competitiveness and world leadership for the EU
 - Stimulating increased and more effective investment in R&D
 - Accelerating innovation
 - Eliminating the barriers to the deployment and growth of new technologies.

In order to achieve these goals, EPIC successfully applied the following agenda in 2005:

- Strategic Vision Document: Photonics for the 21st Century published in February 2005
- Research Themes for FP-7: setting up the Platform along the lines of EPIC by participation in the meeting with European Commissioners Potocnik and Reding on May 19, 2005
- Numerous presentations to the photonics community across Europe to inform them of progress towards the formation of the Technology Platform
- Launch of the Photonics Technology Platform in Brussel on December 1-2, 2005
 - EPIC members are also members of the platform
 - EPIC members hold 7 out of 11 posts on the Executive Board
 - EPIC is the source of information about platform activities

Photons²¹ Executive Board (from left to right, underlined names are EPIC members): P. Leibinger, Trumpf; L. Thylén, Kista; M. Kujawinska, Warsaw Technical University; A. von Witzleben, Jenoptik; B. Schulte, Aixtron; J.F. Coutris, Sagem DS; G. Anania, Bookham; P. Lagasse, IMEC; P. Stormberg, Philips Lighting; C. Dainty, EOS.

Actions 2005

European Coordination Projects

OPERA-2015: Optics and Photonics in the European Research Area

www.opera2015.org

The main objective of OPERA is to provide a Platform for adequate interaction of European IST-research in Optics & Photonics and to develop and implement a joint strategy for research and industry with the title "OPERA 2015" to shape the future of this highly important industrial area.

Started April 2005

MONA: Merging Optics and Nanotechnologies

www.ist-mona.org

The MONA project will contribute to the coordination of photonics research with nanotechnology research. There are three principal objectives:

- Create a common site for the exchange of information concerning research, networks of excellence, and integrated projects in photonics and nanotechnologies.
- Promote the timely exchange of scientific results, market development, and technology needs through MONA-developed workshops.
- Develop a European roadmap for photonics and nanotechnologies.

Started June 2005

ACCORD: Advanced Components Cooperation for Optoelectronics Research and Development

- Objective: Put pre-commercial photonic components and systems in the hands of students and researchers
- Involvement of EPIC: Seven out of nine partners are EPIC members
- Status: Accepted for funding.

Starts September 2006
